Re: PROTECO Superfund Site in Peñuelas, Puerto Rico

Dear Ms. Davis:

Thank you for your letters dated August 5, 2019, December 10, 2019, and February 11, 2020, on behalf of your client, HP Inc. (successor to Digital Equipment Corporation), regarding the PROTECO Superfund Site (the "Site") in Peñuelas, Puerto Rico.

In your letter dated February 11, 2020, you reiterated your request that EPA respond to HP Inc.'s position that it is not liable for response costs at the PROTECO Site because Digital Equipment Corporation de Puerto Rico, and not Digital Equipment Corporation (your client's predecessor), was the generator of hazardous waste sent to the Site. EPA does not agree with HP Inc.'s position. As you note in your letter, manifests documenting the shipment of hazardous waste from Digital facilities to PROTECO identify "Digital Equipment Corp." as the generator name, not Digital Equipment Corporation de Puerto Rico. In addition, a Notification of Hazardous Waste Activity dated August 20, 1986, with the EPA generator ID number PRD991291857 identifies the name of the installation's legal owner as "Digital Equipment Corp., Maynard, MA." *See Attachment 1.*

In your communications to EPA, you identified records that refer to Digital Equipment Corporation de Puerto Rico as the operator and/or lessee of certain facilities in Puerto Rico. However, as we have previously discussed, there is substantial evidence demonstrating that Digital Equipment Corporation, the parent company of Digital Equipment Corporation de Puerto Rico, was a direct operator of its subsidiary's facilities in Puerto Rico. Documents provided by the Computer History Museum indicate that agents who solely worked for Digital Equipment Corporation directly exerted operational control over environmental matters at facilities in Puerto Rico. As you know, the Department of Justice gave a presentation on October 8, 2019, referencing these documents and explaining the United States' position that HP Inc. is liable for Digital Equipment Corporation de Puerto Rico's operations as a successor to Digital Equipment Corporation because agents of Digital Equipment Corporation managed, directed, and/or

controlled operations specifically related to the treatment of waste and other environmental matters at its facilities in Puerto Rico. EPA understands that you have had an opportunity to review the Computer History Museum documents referenced in the October 8, 2019 presentation. EPA is also continuing to review the Computer History Museum documents, which suggest that HP Inc. may also be liable for Digital Equipment Corporation de Puerto Rico's operations under an indirect or veil piercing theory of liability. Please note that in light of EPA's position as described above and for ease of discussion in this letter, EPA refers to the generator of the hazardous waste sent to PROTECO as Digital Equipment Corporation.

In your December 10, 2019 and February 11, 2020 letters, you also requested that EPA remove the volume associated with Digital Equipment Corporation's electroplating sludge from the draft waste-in list that EPA circulated to certain potentially responsible parties for the Site on July 23, 2019. As explained below, EPA's information gathering efforts are ongoing, and EPA is still evaluating evidence related to shipments of hazardous waste to the Site. While EPA recognizes that certain records create ambiguity as to whether hazardous waste generated by Digital Equipment Corporation and shipped to PROTECO may have later been removed from PROTECO during certain time periods, EPA has identified evidence indicating that additional shipments were sent to PROTECO. Thus, as further explained below, EPA does not believe it is appropriate to revise the draft waste-in list at this time.

On April 11, 2019 and July 22, 2019, EPA emailed you copies of manifests and other records documenting the shipment of hazardous waste from a facility in San German (the "San German facility") to PROTECO during the period of November 1984 to September 1985 as well as from a facility in Sabana Grande (the "Sabana Grande facility") to PROTECO during the period of September 1988 to November 1988. All of the manifests documenting the shipment of waste from the Sabana Grande facility to PROTECO between September 1988 and November 1988 include notations that specify the waste was for "temporary storage" at PROTECO. With the exception of one manifest (Manifest No. 88266), these manifests also include notations signifying that the waste was subsequently picked up by Orlando Gonzalez Trucking, Inc. and transported off-site.

In contrast, the manifests documenting the shipment of waste from the San German facility to PROTECO during the period of November 1984 to September 1985 do not include notations stating that the subject waste was for temporary storage only or that the waste was ever removed from PROTECO. EPA does not believe the designation of handling code S01 on manifests signifies that the subject waste was intended for temporary storage and subsequent transfer off-site. Rather, based on the historical operations at PROTECO, EPA understands that the S01 code was likely meant to direct incoming hazardous waste to the container storage facility (also known as unit 4 or the drum storage area) at PROTECO before the waste would ultimately be consolidated, treated, stabilized, and/or buried in other waste disposal units at PROTECO. This understanding is consistent with the fact that many of the hazardous waste manifests documenting the shipment of waste to PROTECO include the handling code designation S01, despite no evidence that such wastes were ever transported off-site.

Furthermore, in addition to the above-referenced manifests provided to you on April 11, 2019 and July 22, 2019, EPA has since located additional evidence documenting the shipment of

hazardous waste from Digital Equipment Corporation to PROTECO. According to a report summarizing a March 21-22, 1984 EPA RCRA inspection of the PROTECO facility, EPA documented the presence of 150 plastic bags containing electroplating sludge that were being stored for Digital Equipment Corporation pending the outcome of a petition to exclude the waste from regulation. Several of the bags were torn and a portion of their contents had spilled onto the ground. *See* Attachment 2. Another inspection conducted by EQB on August 14-16, 1984, documented the presence of approximately 300 opened bags of electroplating sludge from Digital Equipment Corporation being temporarily stored at PROTECO. *See* Attachment 3. Because these inspections predate all of the above-referenced manifests, EPA believes that Digital Equipment Corporation sent at least an additional 300 bags of hazardous electroplating sludge to PROTECO prior to August 1984. EPA acknowledges that such waste may have been later transported from PROTECO to the Seaport-Peder-Most ship for export in or around late August 1984. *See* EPA/EQB RCRA Facility Assessment Report (Exhibit 2 to HP Inc.'s December 10, 2019 Letter).

EPA has identified an additional set of hazardous waste manifests documenting the shipment of hazardous waste from the Sabana Grande facility to PROTECO between September 1988 and December 1988. *See* Attachment 4. Many of these manifests are duplicates of the manifests previously provided to you on April 11, 2019, and include notations that specify the waste was temporarily stored at PROTECO and subsequently picked up by Orlando Gonzalez Trucking, Inc.

In addition, hand-written hazardous waste inventories for the PROTECO facility indicate that approximately 9,000 gallons of sludge were shipped by Digital Equipment Corporation's Aguadilla facility to PROTECO in or around June 1988 and that five drums of spent oil and grease and four drums of diesel with water and dirt were shipped by Digital Equipment Corporation's San German facility in or around July 1988. *See* Attachment 5. These shipments are not reflected in the manifests that were provided to you on April 11, 2019 and July 22, 2019. EPA estimates that Digital Equipment Corporation sent an additional 9,495 gallons of hazardous waste to PROTECO in June and July 1988, beyond what was estimated in EPA's July 23, 2019 draft waste-in list.

Given the above-described evidence of additional hazardous waste shipments from Digital Equipment Corporation to PROTECO, EPA does not believe it is prudent at this time to remove any of Digital Equipment Corporation's estimated volume from the current waste-in calculations for the Site. Should EPA decide to revise its draft waste-in list for the Site, it is more likely that EPA would add the additional waste described above to the total volume associated with Digital Equipment Corporation.

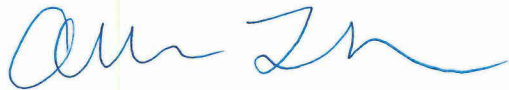

EPA intends to continue its information gathering efforts and requests your assistance with its efforts. At your earliest convenience or by March 23, 2020, please provide the following records (some of which were referenced in your August 5, 2019 and/or December 10, 2019 letters and accompanying exhibits):

1. The August 9, 1983 contract between AMLON Metals Inc. and Digital Equipment Corporation (referenced on HP-001987 – Exhibit 2 of HP Inc.'s August 5, 2019 Letter);

2. Contract enclosed with the May 14, 1986 purchase order (referenced on HP-001987 – Exhibit 2 of HP Inc.'s August 5, 2019 Letter);
3. All disposal and/or reclamation contracts and purchase orders between Digital Equipment Corporation (and/or Digital Equipment Corporation de Puerto Rico) and other parties, including AMLON Metals Inc. and "WRC's facilities in Arizona and Pennsylvania" (referenced on page 2 of HP Inc.'s December 10, 2019 Letter), relating to any of Digital Equipment Corporation's facilities;
4. All records concerning the delisting petition, petition number 0315, submitted to EPA by Digital Equipment Corporation de Puerto Rico on March 12, 1982, including Digital's anticipated plans for disposal of the waste if the petition was granted; and
5. All records concerning Digital Equipment Corporation de Puerto Rico's and/or Digital Equipment Corporation's storage, treatment, and disposal of hazardous and non-hazardous waste at its Aguadilla facility.

If you have any questions regarding this letter, please do not hesitate to reach me at (212) 637-3197 or leshak.andrea@epa.gov.

Sincerely,

Andrea Leshak

Re: Digital Equipment Corporation
San German, Puerto Rico
PRD991291857

Dear Ms. Demo:

Digital Equipment Corporation (Digital), an industrial plant located at San German, Puerto Rico, and dedicated to the manufacture of printed circuits, holds subject permit under the Resource Conservation and Recovery Act. Digital also operates a plant at Aguadilla (San Antonio), Puerto Rico, which holds Permit No. PRD000767855.

Digital had transferred two manufacturing activities (surface mount and Hybrids), at its Aguadilla location that resulted in the generation of hazardous wastes identified under RCRA, to the Digital plant at San German. Under these circumstances, it appears necessary to modify subject permit to delete hazardous wastes now being generated at the Aguadilla plant and that would be generated at the San German facilities once the transfer of operations is completed.

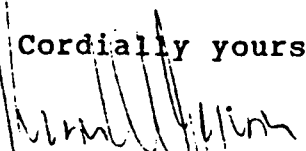

By letter dated May 9, 1986, we included a Revised Part A application for the San German plant to include changes in hazardous waste generation which reflected actual operations up to that date. With the proposed new changes, it is now also necessary to revise the Part A application previously submitted. Please consider the attached revised application and delete the one included in our May 9th letter. The attached application includes the other hazardous wastes to be generated at Digital's San German plant.

U.S. ENVIRONMENTAL PROTECTION AGENCY
NOTIFICATION OF HAZARDOUS WASTE ACTIVITY

INSTRUCTIONS: If you received a preprinted label, affix it in the space at left. If any of the information on the label is incorrect, draw a line through it and supply the correct information in the appropriate section below. If the label is complete and correct, leave Items I, II, and III below blank. If you did not receive a preprinted label, complete all items. "Installation" means a single site where hazardous waste is generated, treated, stored and/or disposed of, or a transporter's principal place of business. Please refer to the INSTRUCTIONS FOR FILING NOTIFICATION before completing this form. The information requested herein is required by law (Section 3010 of the Resource Conservation and Recovery Act).

PLEASE PLACE LABEL IN THIS SPACE

FOR OFFICIAL USE ONLY

ation carefully; if any of it is incorrect, cross through it and enter the correct data in the appropriate fill-in area below. Also, if any of the preprinted data is absent (the area to the left of the label space lists the information that should appear), please provide it in the proper fill-in area(s) below. If the label is complete and correct, you need not complete items I, III, V, and VI (except VI-B which must be completed regardless). Complete all items if no label has been provided. Refer to the instructions for detailed item descriptions and for the legal authorizations under which this data is collected.

POLLUTANT CHARACTERISTICS

INSTRUCTIONS: Complete A through J to determine whether you need to submit any permit application forms to the EPA. If you answer "yes" to any questions, you must submit this form and the supplemental form listed in the parenthesis following the question. Mark "X" in the box in the third column the supplemental form is attached. If you answer "no" to each question, you need not submit any of these forms. You may answer "no" if your activity is excluded from permit requirements; see Section C of the instructions. See also, Section D of the instructions for definitions of bold-faced terms.

IV. DESCRIPTION OF HAZARDOUS WASTES

A. EPA HAZARDOUS WASTE NUMBER — Enter the four-digit number from 40 CFR, Subpart D for each listed hazardous waste you will handle. If you handle hazardous wastes which are not listed in 40 CFR, Subpart D, enter the four-digit number(s) from 40 CFR, Subpart C that describes the characteristics and/or the toxic contaminants of those hazardous wastes.

B. ESTIMATED ANNUAL QUANTITY — For each listed waste entered in column A estimate the quantity of that waste that will be handled on an annual basis. For each characteristic or toxic contaminant entered in column A estimate the total annual quantity of all the non-listed waste(s) that will be handled which possess that characteristic or contaminant.

C. UNIT OF MEASURE — For each quantity entered in column B enter the unit of measure code. Units of measure which must be used and the appropriate codes are:

ENGLISH UNIT OF MEASURE **CODE**
 POUNDS.....P
 TONS.....T

METRIC UNIT OF MEASURE **CODE**
 KILOGRAMS.....K
 METRIC TONS.....M

If facility records use any other unit of measure for quantity, the units of measure must be converted into one of the required units of measure taking into account the appropriate density or specific gravity of the waste.

D. PROCESSES**1. PROCESS CODES:**

For listed hazardous waste: For each listed hazardous waste entered in column A select the code(s) from the list of process codes contained in Item III to indicate how the waste will be stored, treated, and/or disposed of at the facility.

For non-listed hazardous wastes: For each characteristic or toxic contaminant entered in column A, select the code(s) from the list of process codes contained in Item III to indicate all the processes that will be used to store, treat, and/or dispose of all the non-listed hazardous wastes that possess that characteristic or toxic contaminant.

Note: Four spaces are provided for entering process codes. If more are needed: (1) Enter the first three as described above; (2) Enter "000" in the extreme right box of Item IV-D(1); and (3) Enter in the space provided on page 4, the line number and the additional code(s).

2. PROCESS DESCRIPTION: If a code is not listed for a process that will be used, describe the process in the space provided on the form.

NOTE: HAZARDOUS WASTES DESCRIBED BY MORE THAN ONE EPA HAZARDOUS WASTE NUMBER — Hazardous wastes that can be described by more than one EPA Hazardous Waste Number shall be described on the form as follows:

1. Select one of the EPA Hazardous Waste Numbers and enter it in column A. On the same line complete columns B, C, and D by estimating the total annual quantity of the waste and describing all the processes to be used to treat, store, and/or dispose of the waste.
2. In column A of the next line enter the other EPA Hazardous Waste Number that can be used to describe the waste. In column D(2) on that line enter "included with above" and make no other entries on that line.
3. Repeat step 2 for each other EPA Hazardous Waste Number that can be used to describe the hazardous waste.

EXAMPLE FOR COMPLETING ITEM IV (shown in line numbers X-1, X-2, X-3, and X-4 below) — A facility will treat and dispose of an estimated 900 pounds per year of chrome shavings from leather tanning and finishing operation. In addition, the facility will treat and dispose of three non-listed wastes. Two wastes are corrosive only and there will be an estimated 200 pounds per year of each waste. The other waste is corrosive and ignitable and there will be an estimated 100 pounds per year of that waste. Treatment will be in an incinerator and disposal will be in a landfill.

DATE: October 11, 1984

SUBJECT: RCRA sampling inspection at Servicios Carbareon, Inc., Penuelas, Puerto Rico (PRD091018622)

FROM: Joseph V. Cosentino, Environmental Scientist
Source Monitoring Section *J.V.C.*

TO: Ernest Regna, Chief
Solid Waste Branch

THRU: John Ciancia, Chief
Source Monitoring Section *John Ciancia*

Richard D. Spear, Chief
Surveillance and Monitoring Branch *R.D.S.*

On March 21-22, 1984 a RCRA sampling survey was conducted at Servicios Carbareon, Inc. (PRD091018622) located on Rt. 385, Km 3.5 in Penuelas, Puerto Rico. Participating in this inspection were Louis DiGuardia, Mike Glogower, Brian Kovak, Nick Magriples and myself. Myra Perez, Ivette DeJesus, Olga Aveles, Roberto Berberena, Yazmin Lopez, Maria Rodriguez, Dulcillo Medina and Jose Torraca of the Environmental Quality Board (EQB) of Puerto Rico accompanied EPA. Also present were Edert Ortiz, Director of Operations, Juan Negron, Chief Chemist, Mario Rissy, Compliance Officer for Servicios Carbareon and Adolfo Valdes of Envirolabs Inc. *FCH*

Servicios Carbareon is engaged in the transport, treatment, and storage and disposal of industrial wastes, both hazardous and non-hazardous. A site map and legend are attached as Figure 1.

This survey, conducted at the request of the Solid Waste Branch was to verify site conditions, groundwater monitoring data and unit closures. The areas of concern were: a waste oil lagoon, non-hazardous waste land-farm, drum storage area, lindane storage tank area and the ground water monitoring wells.

As a result, the following samples were collected at the locations described:

- Sample #66055 was a composite of soil (surface to 4 inches deep) collected from the eastern half of the drum storage area for organics and metals analysis. The drum storage area, designated as #4 on site map and shown in photographs # 4 & 6 has an earthen floor and dike. The floor of the storage area did not appear to be sloped nor was a system for removal of spills, leaks or precipitation evident. At the time of this inspection, approximately 150 plastic bags (yellow) containing electroplating sludge were being stored for Digital Equipment Corporation pending the outcome of a petition to exclude the waste from regulation. Several of the bags were torn and a portion of their contents had spilled onto the ground. Also, about 100 drums of various wastes (i.e. solvents, tars and scrap thermometers) were being stored prior to immobilization. *Drum (27)*

- Sample #66056 was a composite of soil (surface to 4 inches deep) collected from the western half of the drum storage area for organics and metals analysis.

DRUM
(Soil)

- Sample #66057 was a single grab collected from the oil lagoon for metals and organics analysis. The lagoon is designated as #9 on site map and is shown in photographs #7 & 8. The lagoon is unlined and used for the storage of various petroleum wastes. Accumulated water and rainwater are pumped to an adjacent rainwater lagoon, number 13 on site map.

Oil Lagoon

- Sample #66058 was a composite of soil (surface to 5 inches deep) collected around an above ground lindane storage tank for EP toxicity (organics) analysis. The tank designated as #15 on site map is shown in photographs 3 and 14. An earthen containment system surrounds the tank. Photograph #15 shows the former lindane storage tank, no longer in use. The lindane is disposed of via solidification/immobilization.

? old
liner
oil
tank

- Sample #66059 was a composite of soil (surface to 5 inches deep) collected from the southern half of the landfarm for organics analysis. This area designated as #14 on site map is shown in photographs 9 thru 13. The landfarm is used for disposal of non-hazardous industrial wastes (i.e. sludges, off-spec food stuffs and off-spec pharmaceuticals).

Land farm

- Sample #66060 was a composite of soil (surface to 5 inches deep) collected from the northern half of the landfarm for organics analysis.

Land farm

- Sample #66062, 66063 and 66064 were grabs from the facility's downgradient RCRA monitoring wells collected for organics analysis. It would appear from the information on hydrogeologic conditions at this site that these wells are not downgradient of the regulated waste treatment/disposal units (see Figure 3).

Downgradient
wells

- Sample #66065 was a grab from the facility's upgradient RCRA well collected for organics analysis.

Upgradient
well

- Sample #66066 was a grab sample collected from the oil lagoon for testing as an ignitable waste.

Oil Lagoon

- Sample #66067 was a grab from the rainwater lagoon collected for organics analysis. This unit is designated as #13 on the site map and shown in photographs 16 thru 19. This lagoon was selected for sampling after a small tank truck was observed discharging an unknown substance into it (see photograph #18).

Rainwater
lagoon

All samples were collected in accordance with EPA standard procedures. Figures 2 and 3 depict sample locations. Figure 4 presents monitoring well measurements taken prior to sample collection.

discharge?

All samples were analyzed at EPA's Edison, NJ laboratory. The data obtained from the analyses is attached as Tables 0 thru 4. Table 0 presents the organic compounds for which analysis was conducted. Tables 1 and 2 present the results of the organics analysis. Table 3 presents the results of metals analysis and Table 4 presents the results of ignitability testing and EP toxicity analysis.

The results indicate significant metals contamination of the soil in the drum storage area and significant organics contamination in the oil lagoon and non-hazardous landfarm. The designated RCRA monitoring wells were relatively free of organics contamination. However, well depths and locations in light of hydrogeologic conditions at the site make this data questionable at best.

Attachments:

- Table 0 - List of Organic Compounds for which Analysis was Conducted.
- Table 1 - Results of Organics Analysis on Samples Collected 2-21-84.
- Table 2 - Results of Organics Analysis on Samples Collected 2-22-84.
- Table 3 - Results of Metals Analysis
- Table 4 - Results of Ignitability and E.P. Toxicity Analysis

- Figure 1 - Site Map and Legend.
- Figure 2 - Sample Location Map.
- Figure 3 - Well and Well Sample Location Map.
- Figure 4 - Monitoring Well Measurements.

- Appendix 1 - Photographs taken at Servicios Carbareon.
- Appendix 2 - Receipt for Samples.

RCRA INSPECTION REVIEW SHEET

Name of Facility : Servicios Cabareón
RCRA ID Number : PRD 091018622
Date of Inspection : August 14, 15, and 16, 1984
Type of Inspection : T S D
Name of EQB/State Inspector : Ms. Yazmin López Vázquez 

Findings of Inspection:

At the time of the inspection it was found that Servicios Carbareón is not in compliance with some standards applicable to a TSD Facility, according to State Regulations, Regulation for the Control of Hazardous and Non-Hazardous Solid Wastes, amended version, March 5, 1982.

The following violations were observed at the time of the inspection:

A - Class I:

Rule 302 E - Places for Handling Solid Waste

Servicios Carbareón disposed of hazardous wastes in a non-designated disposal unit for that kind of activity.

Rule 304 H - General Hazardous Solid Waste Prohibitions.

SCI disposed of hazardous solid wastes outside the hazardous solid wastes areas designated in the operating plan for the facility.

Rule 706 C (2b) - Requirements for Transport of Hazardous Solid Waste and Acceptance of Hazardous Solid Waste from Transporters.

Servicios Carbareón accepted hazardous wastes for disposal without a signed Manifest (as required by Rule 703) which designates the receiver's facility as the destination for the hazardous solid waste.

Rule 805 A (3a) Closure

A closure plan was not submitted by Servicios Carbareón at least 180 days before the date they expected to begin closure of the following facilities:

- 1- Drums burial areas:
 - a. #1 (Cavity 1c)
 - b. #2 (General Electric)
 - c. #3 (Roche)
 - d. #5 (Searle)
- 2- Immobilization facilities:
 - a. TI-1
 - b. TI-2
- 3- Land treatment area AC-1.
- 4- Two land treatment areas (presently closed immobilization trenches TI-1 and TI-2 were later operated and closed without plan).
- 5- A surface impoundment presently closed (where land treatment area AC-2 was located and closed without plan).

RULE 807 I (2) Physical and Chemical Analysis

No physical or chemical analyses are performed in order to determine if the results matches the identity of the waste specified in the accompanying manifest or shipping paper.

Rule 807 I (4)

SCI does not require of the generator a detailed chemical and physical waste analysis at least annually or to repeat it as necessary.

Rule 807 I (5)

SCI does not follow its written Waste Analysis Plan that describes procedures which will be used to inspect hazardous solid waste shipments.

Rule 809 A - Precautions for Ignitable or Reactive Waste

Precautions are not taken to prevent accidental ignition of ignitable wastes in container storage area.

Rule 809 B - Handling of Ignitable, Reactive or Incompatible Waste.

The storage of ignitable wastes in containers is conducted in a way that can generate extreme heat, pressure, fire or explosion and damage the structural integrity of the device containing the waste.

Rule 812 B (3) - Facility Requirements (container storage area)

There is no roof or other overhead covering to protect the drums containing ignitable waste from direct sunlight creating in this way a hazardous condition.

Rule 812 - D (1,2) - Handling Containers.

All the bags (approximately 300) containing electroplating sludge were opened.

Rule 816 D - Special Requirements for Ignitable or Reactive Waste in Landfills.

Ignitable wastes are not treated prior to being deposited in the immobilization trench. Nor is analysis performed to determine if the material no longer meets the definition of ignitable waste.

Rule 817 B (15) - General Requirements for Surface Impoundments

Earthen dikes do not have an outside protective cover to minimize erosion from wind and water.

B. Class III Violations:

Rule 803 E - Emergency Procedures in Operating Plan

The list of emergency equipment and plan for evacuating facility personnel is not updated.

Rule 808 B (1) Personnel

The personnel at the facility are not trained in effective environmental control, emergency response and health and safety measures.

Rule 808 C (1) Training of Personnel

Personnel at the facility have not attended special training sessions in hazardous solid waste management procedures appropriate to the positions in which they are employed.

Rule 808 C (2b)

The training program does not ensure that facility personnel is able to respond effectively to emergencies by familiarizing it with emergency equipment and emergency systems.

Rule 808 C (5c)

SCI does not have a written description of the type and amount of introductory and continuing training that is to be given to each person.

Rule 810 C (4) - Required Equipment

Insufficient water pressure and volume to supply hose system, nor was foam producing equipment available.

Rule 810 F - Required Aisle Space

Lack of aisle space in the area for electroplating sludge bags.

RECOMMENDATIONS:

1. According to the Compliance Plan of February 10, 1984, Servicios Carbareón scheduled for June 1984, the following:
 - a) Construction of a permanent structure to serve as a drum storage area.
 - b) Install a laboratory inside the facility.

- c) Conduct a "generator audit" to review the generator's processes that produce hazardous wastes. At the time of the Full RCRA Inspection any of the above mentioned requirements were performed. Is recommended to consider them as violations to the State Regulations.
